

A1
orientation of the frame. A slot 38 is formed in one of the catch part side walls 32 and extends into arcuate portion 36 of the retainer.

In the Abstract

Please substitute the following abstract for the abstract submitted in the original application.

A2
A mount for an appliance such as a TV monitor which includes a box-like frame having a catch part at the top of the frame. A swivel part which may be attached to either the ceiling or the wall is provided. The catch part has a slot into which the swivel part is fitted, thus engaging the catch part to support the frame and the appliance. The disclosed support provides for ease of assembly as the appliance is supported from the ceiling or wall by the mere placement of said swivel in the catch part, without requiring any other assembly. The appliance may be tilted or rotated in the support.

In the Drawings

Applicant has attached redline drawings for Figures 1-5 and 11-12. Applicant requests Examiner's approval of the proposed amendments to the drawings, which are in response to the Examiner's comments. Upon approval and issuance of a Notice of Allowance, the amendments will be incorporated into the formal drawings.

In the Claims:

- sub
A3
1. (Amended) A mount for an appliance comprising: a frame for supporting said appliance, said frame including an upper catch part, said catch part having a slot therein, a swivel part suspended from a support adapted to be mounted to a wall or ceiling, said swivel part fitted into said slot and engaging the catch part to support said frame.
 2. (Amended) The mount of claim 1, wherein said swivel part includes a barrel-shaped member, said catch part including a retainer intersected by said slot and said retainer including an arcuate portion, said barrel-shaped member located under said arcuate portion to allow pivotal movement of said arcuate portion about said barrel-shaped member.

Cont
A3
3. (Amended) The mount of claim 2, wherein said barrel-shaped member carries a key part extending into said catch part, said key part having an opening, said catch part having a side wall, a bolt extending through a side wall in said catch part and key part opening, a nut turned upon said bolt and against said key part, said bolt and said nut drawing said frame toward said key part when said nut is turned upon said bolt against the key part to tilt said frame relative to said swivel part.

4. (Amended) The mount of claim 2, wherein said swivel part includes a rotation member allowing said frame to be rotated about a vertical axis.

A4
9. (Amended) A mount for an appliance comprising: a frame for supporting said appliance, said mount including an upper catch part, said catch part having a singular slot therein that is located centrally relative to side portions of said frame, a swivel part fitted into said slot and engaging the catch part to support said frame from a wall or ceiling.

A5
12. (Amended) The mount of claim 10, further comprising a key part attached to said barrel-shaped member and extending into said catch part, said key part having an opening, said catch part having a side wall, a bolt extending through a side wall in said catch part and key part opening, and a nut turned upon said bolt and against said key part, said bolt and said nut partially defining a tilting mechanism by which said frame is drawn toward said key part when said nut is turned upon said bolt against the key part to tilt said frame relative to said swivel part.

Please cancel claims 16-20.

Please add new claims 21-30 as follows:

Sub
P4
A6
21. A mount for an appliance including:

a support for supporting the appliance from a ceiling or a wall;

a barrel-shaped swivel part; and

a catch part, the barrel-shaped swivel part engaging the catch part, and the barrel-shaped swivel part being moveable relative to the catch part to tilt the appliance.

✓ 22. The mount of claim 21 wherein the catch part has a slot and the swivel part is at least partial located through the slot.

✓ 23. The mount of claim 22 wherein the barrel-shaped swivel part is restrained from horizontal movement relative to the catch part.

✓ 24. The mount of claim 21, further including a rotation member for allowing rotation of the appliance about a vertical axis.

25. The mount of claim 21 wherein the barrel-shaped swivel part has a key part, the key part having an opening for receiving a bolt, the bolt extending through a side wall of the catch part and the key part opening, a nut threaded upon the bolt and against the key part, the bolt and the nut tilting the appliance from vertical when the bolt is turned relative to the nut.

26. The mount of claim 21 wherein the swivel part is attached to the support assembly and the catch part is attached to the frame.

✓ 27. A mount for an appliance including:

a frame for holding the appliance;

a support assembly for supporting the frame from a wall or ceiling; and

a tilting mechanism whereby movement of the tilting mechanism tilts and holds the appliance relative to a vertical plane.

✓ 28. The mount of claim 27 further including a catch part on the frame, the catch part having a slot therein, the tilting mechanism at least partially located in the catch part and engaged therewith to tilt and hold the appliance into the tilted position.

29. The mount of claim 28 wherein the tilting mechanism includes a barrel-shaped member bearing against an arcuate portion of the catch part.

30. The mount of claim 29 further including a key part attached to the barrel-shaped member, the key part having an opening; and a bolt extending through a side wall in the catch part and the key part opening.
